Annex G: Water – supplementary material

G.1 PREVIOUS QUANTIFIED ASSESSMENTS

Most contemporary analyses of the performance of water supply infrastructure in Great Britain focus on quantification of the projected impacts of climate change, and the requirements of the EU Water Framework Directive.

Figure 1: The classification of Environment Agency catchment management units by licence availability.

Regulation of the water environment of Great Britain, and thus management of the competition for water resource within it, falls within the remit of the Environment Agency of England and Wales and the Scottish Environmental Protection Agency. These are currently the only analyses that directly evaluate the impacts of, and interactions between, all uses of water. The Environment Agency suggests that most sources of fresh water in England and Wales are already contributing to national water resource at the limit of their means (EA, 2008) (Figure 1). By way of contrast, 82% of surface water bodies and 88% of groundwater bodies in Scotland have 'good' quantitative status (SEPA, 2009), suggesting that additional options for water resource development remain.

The water supply companies of England and Wales and Scottish Water perform detailed quantitative evaluation; however, it is limited to the performance of the public water supply infrastructure. The most recent draft Water Resource Management Plans identified changes in deployable water resource due to projected climate change between 0% and 58%, reflecting regional variation in impacts (Charlton and Arnell, 2011). The estimated national aggregate loss in deployable water resource was 3% by 2034–2035 under a 'core' climate scenario; however, this study did not include analysis of resource-critical regions such as Wales, Scotland and East Anglia. Furthermore, there are significant technical deficiencies and inconsistencies in the methods of climate change impact assessment presently employed in developing the Water Resource Management Plans, for which an improved nationally consistent replacement is forthcoming.

A more comprehensive analysis of the River Thames suggests amplified and uncertain local impacts (Manning *et al.*, 2009). This study reports a change in the mean daily flow exceeded on 50% of days of up to 70% for the period 2040–2069, and nearly 80% for the period 2070–2099.

G.2 DATA FOR TRANSITION STRATEGIES

Values for each water company were compiled from the available data, and adjusted for existing imports and exports:

| Table 1: The supply capacity of each water supplier in 2008 | | | | | | |
|---|-----------------|---------|---------|--------|--|--|
| Company | Water available | Imports | Exports | Supply | | |
| Scottish Water | 3564 | 0 | 0 | 3564 | | |
| Thames Water | 2840 | 2 | 24 | 2818 | | |
| Severn Trent Water | 2067 | 43 | 84 | 2027 | | |
| United Utilities | 2096 | 1 | 90 | 2007 | | |
| Yorkshire Water | 1365 | 47 | 0 | 1411 | | |
| Anglian Water | 1484 | 3 | 109 | 1378 | | |
| Dwr Cymru Welsh Water | 1069 | 12 | 28 | 1053 | | |
| Veolia Water Central | 1053 | 57 | 80 | 1030 | | |
| Northumbrian Water | 933 | 0 | 1 | 932 | | |
| Southern Water | 762 | 28 | 42 | 749 | | |
| South East Water | 594 | 84 | 30 | 648 | | |
| South West Water | 504 | 11 | 11 | 504 | | |
| Essex and Suffolk Water | 387 | 94 | 5 | 476 | | |
| Wessex Water | 418 | 24 | 9 | 433 | | |
| South Staffs Water | 353 | 0 | 1 | 353 | | |
| Bristol Water | 341 | 1 | 12 | 330 | | |
| Portsmouth Water | 235 | 0 | 4 | 230 | | |
| Sutton and East Surrey Water | 200 | 5 | 5 | 200 | | |
| Sembcorp Bournemouth Water | 211 | 0 | 41 | 170 | | |
| Cambridge Water | 99 | 0 | 0 | 99 | | |
| Dee Valley Water | 78 | 0 | 0 | 78 | | |
| Veolia Water Southeast | 51 | 2 | 0 | 53 | | |
| Veolia Water East | 37 | 0 | 0 | 37 | | |

Table 2: The proportion of the total population of England and Wales served by each private water company in 2008

| Company | Proportion () |
|------------------------------|----------------|
| Thames Water | 17.2 |
| United Utilities | 13.7 |
| Yorkshire Water | 9.7 |
| Anglian Water | 8.5 |
| Veolia Water Central | 6.2 |
| Severn Trent Water | 5.8 |
| Dwr Cymru Welsh Water | 5.8 |
| Northumbrian Water | 5.0 |
| Southern Water | 4.7 |
| South East Water | 4.0 |
| Essex and Suffolk Water | 3.6 |
| South West Water | 3.3 |
| South Staffs Water | 2.5 |
| Wessex Water | 2.5 |
| Bristol Water | 2.3 |
| Portsmouth Water | 1.3 |
| Sutton and East Surrey Water | 1.3 |
| Sembcorp Bournemouth Water | 0.8 |
| Cambridge Water | 0.6 |
| Dee Valley Water | 0.5 |
| Veolia Water Southeast | 0.3 |
| Veolia Water East | 0.3 |

| Table 3: The proportion of the population metered | | | | | |
|---|----------|----------|----------|----------|--|
| Company | 2008 (%) | 2014 (%) | 2030 (%) | 2040 (%) | |
| Veolia Water East | 61 | 71 | 80 | 90 | |
| Veolia Water Southeast | 60 | 90 | 90 | 90 | |
| Anglian Water | 55 | 81 | 81 | 90 | |
| Cambridge Water | 54 | 70 | 80 | 90 | |
| South West Water | 53 | 79 | 80 | 90 | |
| Sembcorp Bournemouth Water | 45 | 66 | 80 | 90 | |
| Dee Valley Water | 42 | 58 | 80 | 90 | |
| Wessex Water | 37 | 58 | 80 | 90 | |
| Essex and Suffolk Water | 35 | 43 | 80 | 90 | |
| Veolia Water Central | 33 | 44 | 80 | 90 | |
| Southern Water | 32 | 92 | 92 | 92 | |
| Yorkshire Water | 31 | 48 | 80 | 90 | |
| South East Water | 31 | 68 | 80 | 90 | |
| Severn Trent Water | 30 | 42 | 80 | 90 | |
| Bristol Water | 27 | 46 | 80 | 90 | |
| Sutton and East Surrey Water | 27 | 47 | 80 | 90 | |
| Thames Water | 24 | 37 | 80 | 90 | |
| United Utilities | 24 | 38 | 80 | 90 | |
| Dwr Cymru Welsh Water | 21 | 41 | 80 | 90 | |
| South Staffs Water | 20 | 35 | 80 | 90 | |
| Northumbrian Water | 15 | 43 | 80 | 90 | |
| Portsmouth Water | 10 | 24 | 80 | 90 | |

| Table 4: Non-household demand as a proportion of total demand in 2008 | | | |
|---|----------------|--|--|
| Company | Proportion (%) | | |
| Anglian Water | 31 | | |
| Dwr Cymru Welsh Water | 26 | | |
| Northumbrian Water | 28 | | |
| Severn Trent Water | 37 | | |
